Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims 1 — 5   (Canceled)

6.   (Currently Amended)   A computer program product readable by a computer and encoding instructions for executing a computer process for notifying a user of a small computer device of notification events, the process comprising:

storing two or more notification profiles for each of one or more users, wherein each notification profile is associated with a predetermined notification mode and wherein within each notification profile are notification events and wherein each of the notification events is associated with at least one notification type;

receiving a selection signal to select one notification mode; and

applying the selected notification mode to the small computer device and wherein the device remains in the selected notification mode until another notification mode is selected and wherein the user is notified of events in accordance with the notification profile associated with the selected notification mode.

7.   (Previously Presented)   The computer program product as defined in claim 6 wherein the process further comprises:

receiving an indication to select a notification mode;

displaying a notification mode menu; and

wherein the received selection signal relates to a selection from the displayed notification mode menu.

8.   (Previously Presented)   The computer program product as defined in claim 6 wherein the computer further comprises a calendar-type application program storing reminder events and wherein the selection signal for selecting one notification mode is generated by the calendar-type application program.

9.   (Currently Amended)   A computer system for notifying a user of notification events, the system comprising:

a memory unit storing a plurality of notification profiles for each of one or more users, wherein each notification profile is associated with a predetermined notification mode and wherein within each notification profile are notification events and wherein each of the notification events is associated with at least one notification type;

a first output device notifying the user of a notification event using a first notification type;

a second output device notifying the user of the notification event using a second notification type wherein the second notification type is different from the first notification type; and

a processing unit in response to a profile selected from the plurality of profiles in the memory unit automatically determining whether to notify the user using the first notification type or the second notification type.

10.   (Previously Presented)   The computer system as defined in claim 9 wherein the notification event is the reception of email over a wireless network.

11.   (Previously Presented)   The computer system as defined in claim 9 wherein the notification event is a calendar event stored by a calendar-type application program.

12.   (Previously Presented)   The computer system as defined in claim 9 wherein the first notification type is an audible signal and the second notification type is a visual display.

13.   (Previously Presented)   The computer system as defined in claim 9 wherein the first notification type is a vibration signal and the second notification type is an audible signal.

14.   (Previously Presented)   The computer system as defined in claim 9 wherein the two or more stored profiles include one or more assignments of a particular sound file to a particular event.

15.   (Previously Presented)   The computer system as defined in claim 9 wherein each profile comprises an event notification type based on a user's present environment.

16.   (Previously Presented)   The computer system as defined in claim 9 wherein a user is capable of being notified of an event in a plurality of ways, depending on a currently selected profile.

17.   (Previously Presented)   The computer system as defined in claim 16 wherein each user has a plurality of profiles.

18.   (Previously Presented)   The computer system as defined in claim 17, wherein each of the plurality of profiles contains a plurality of notifications events and associated notification types.

Claims 19-25 (Withdrawn from Consideration by the Examiner)

26.   (Currently Amended)   The computer program product readable by a computer and encoding instructions for executing a computer process as defined in claim 6 wherein the computer process for notifying a user of a small computer device of notification events further comprises:
        selecting a particular notification mode to modify a notification profile for that mode; and
        storing the modified profile.

27.   (Currently Amended)   The computer program product readable by a computer and encoding instructions for executing a computer process as defined in claim 6 wherein the computer process for notifying a user of a small computer device of notification events further comprises:
        selecting volume levels for different notification types associated with notification events within a notification profile.
